SUPPLY CHAIN RESILIENCY BENCHMARKING REPORT
YOUR STAGE: **AWARE**

The supply chain resiliency maturity model

REACTIVE · AWARE · PROACTIVE · INTEGRATED · RESILIENT ★

FINDINGS EXECUTIVE SUMMARY

Your company has initiated the journey towards Supply Chain Resiliency. You're at the first stage: Aware. This means, you have an ongoing monitoring system that alerts you about disruptions that might impact your operations. You might also have some visibility to your suppliers' global sites and operations. Your supply chain experts are spending a small portion of their time on managing risk.
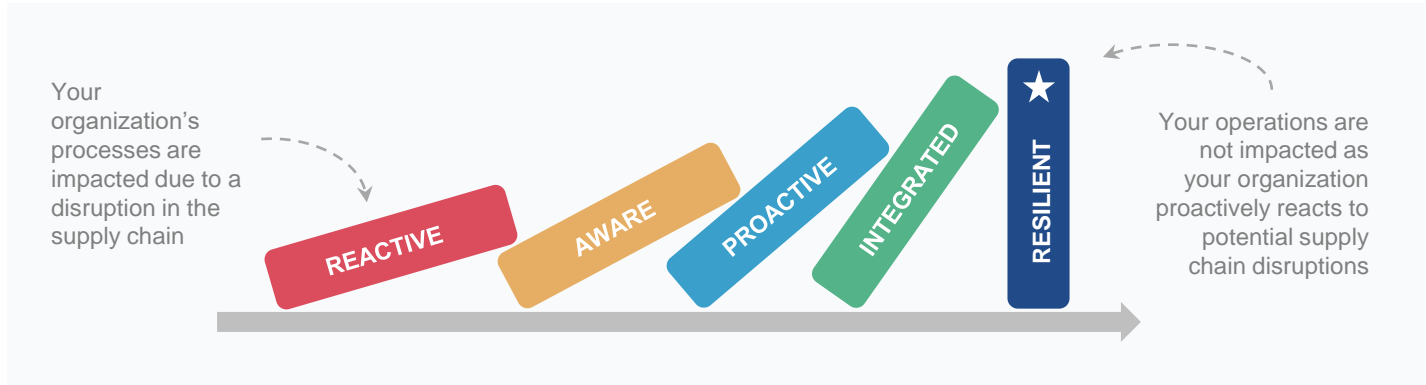

1. You have **basic visibility of tier 1** supplier sites' locations, parts-to-site mapping, & recovery times

2. Your company **needs formal teams** with dedicated functional leads

3. Your event response **team is developing** and has limited resources

4. Event response process is functionally based on severity **without a standard operating procedure**

5. You have **started collecting Business Continuity Plans** (BCP) from critical suppliers, but haven't reviewed the information provided

EXPECTED OUTCOME

Trade sanctions are being applied on different countries.	• Part-site mapping provides country of origin information for a few products that were mapped. • Alternate site information available to switch production.
A critical tier 2 supplier site announces an unforeseeable event, and your tier 1 supplier is struggling to deliver on time.	• Delayed knowledge of event due to limited tier 2 visibility. • No alternate tier 2 sites. • Recovery time unavailable.
Massive hurricane causes indefinite power outage at supplier's manufacturing site.	• For BCPs collected: Delayed review of information and mitigations actions. • For BCPs not collected: Continuity and sourcing issues with revenue loss.
Port workers' strike leaves cargo operations crippled near your site.	• No identified alternatives. • Higher shipping costs. • Delayed shipment and on-time delivery metrics affected.
Emergency response team cannot find the required information to create a plan during a disruptive event.	• Time lost in coordination. • Delayed mitigations. • Cash burn due to lack of resource utilization.

WHAT DOES SUPPLY CHAIN RESILIENCY MATURITY MODEL MEAN?

A model that helps to evaluate your current risk management capabilities and build a transformational roadmap to be Proactive and Resilient. Many companies assume they have a better than average supply chain resilience. However, in case of a disruptive event – geographical or financial – it is evident that not all supply chains are equally resilient to disruptions. Leading companies have a well-established people, process and technology framework to effectively and efficiently manage risk.

Your organization's processes are impacted due to a disruption in the supply chain

REACTIVE   AWARE   PROACTIVE   INTEGRATED   RESILIENT ★

Your operations are not impacted as your organization proactively reacts to potential supply chain disruptions

HOW TO REACH THE NEXT STAGE OF MATURITY?

To take your organization from AWARE to PROACTIVE in the resiliency maturity model, consider the following recommendations.

- Make an all team inclusive Event Response Team.
- Regularly train team members to have a rapid response system.

- Integrate supply chain disruptions monitoring process with supply chain mapping to ensure maximum visibility.

- Prioritize key risk areas based on company criticality and create proactive mitigations for high-risk suppliers, parts & sites.

- Review BCPs of critical suppliers and identify gaps or areas of improvement.
- Initiate projects to close the gaps identified.

- Set-up and achieve quarterly/half-yearly priority based goals to leverage the most out of process, people & technology.

TAKE THE NEXT STEP TO MATURITY WITH RESILINC
