

# SUPPLY CHAIN RESILIENCY BENCHMARKING REPORT

YOUR STAGE: RESILIENT

The supply chain resiliency maturity model

## FINDINGS EXECUTIVE SUMMARY

Your company is focused on continuous supply chain improvement by multi-tier mapping intelligence, effective risk metrics, multi-party table top exercises and an efficient Risk Governance Board in place to ensure accuracy and efficiency across all processes.

1. Your risk program is implemented and **adopted across all business units** within the company
2. You have a **widespread collaboration** and **incentives** for suppliers to improve transparency & resiliency
3. Your **sub-tier BCPs are collected** for critical suppliers with high exposure
4. Your risk program, metrics & progress are **reviewed regularly** by stakeholders & board members
5. You have achieved end-to-end supply chain mapping & **refresh data** across all critical products
6. You have enhanced sourcing strategies and built **resiliency while designing** new products

## What Happens

Hurricane season is approaching; risk team has proactively identified hotspots and suppliers in the region.

- Continuity capabilities reviewed and tested.
- Improvements suggested.
- Alternate sites identified to switch production.

A factory fire takes place at a critical supplier site; the Event Response team analyses impact on parts, sites, products and revenue.

- Event impact assessed within minutes.
- Mitigation strategies readily available.
- Event post mortem conducted to close any gaps in the process followed and continuously improve.

A sub-tier is commonly used by several tier 1 supplier; high level of aggregation with single point of failure.

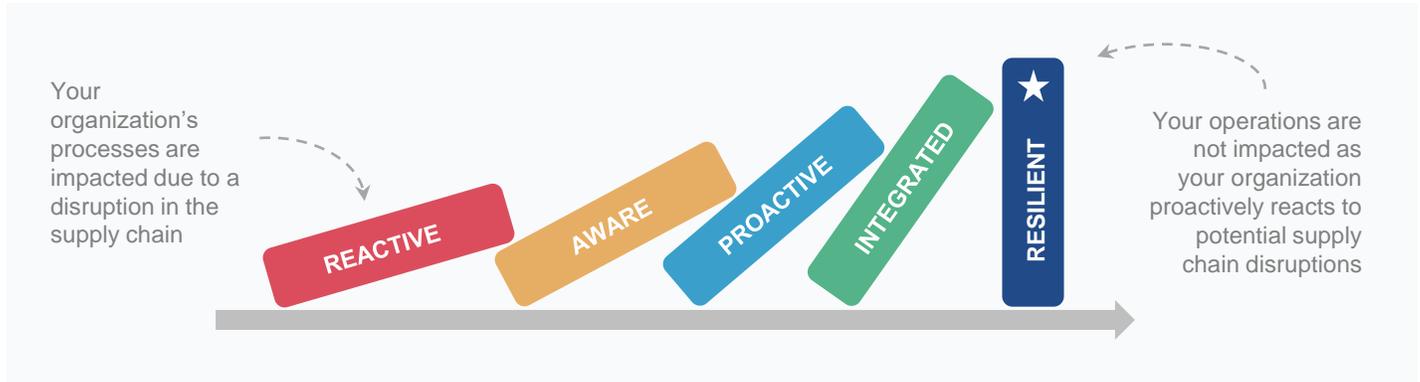

- Formal review conducted.
- Mitigation playbook activated to ensure risk is under control.
- Alternate suppliers identified and validated.

Insurance cover for Business Interruption (BI) and Contingent Business Interruption (CBI) included as a part of property insurance.

- High risk tolerance achieved.
- Scope of business loss decreased.
- Operational excellence achieved.

## WHAT DOES SUPPLY CHAIN RESILIENCY MATURITY MODEL MEAN?

A model that helps to evaluate your current risk management capabilities and build a transformational roadmap to be Proactive and Resilient. Many companies assume they have a better than average supply chain resilience. However, in case of a disruptive event – geographical or financial – it is evident that not all supply chains are equally resilient to disruptions. Leading companies have a well-established people, process and technology framework to effectively and efficiently manage risk.

## HOW TO REACH THE NEXT STAGE OF MATURITY?

To maintain resiliency and continuously improve, consider the following recommendations.

- Establish Center of Excellence and embed the importance of risk management into the company culture.
- Perform benchmarking and gap assessments to maintain resiliency.
- Share best practices and increase awareness across industries.
- Reward resilient suppliers and internal teams to create a risk focused culture across the company and its operations.
- Adopt algorithmic planning and apply data science to analyse granular events at a global scale and formulate prescriptive analytics to transform risks into opportunities.
